(57)ABSTRACT

Formulations of pesticides are disclosed, specifically pesticidal blends of essential oils and other ingredients, that have been found to enhance the activity of the active pesticidal ingredients. The formulations may be, for example, emulsions or dust formulations. For example, a composition for controlling a target pest is disclosed that comprises at least one active agent and a formulation agent, wherein: the active agent is capable of interacting with a receptor in the target pest; the active agent has a first activity against the target pest when applied without the formulation agent and the composition has a second activity against the target pest; and the second activity is greater than the first activity.

ENHANCED FORMULATIONS, COMPOSITIONS AND METHODS FOR PEST CONTROL

RELATED APPLICATIONS

[0001] This application claims the benefit of U.S. Provisional Patent Application No. 61/211,428, filed Mar. 28, 2009, the entire text whereof is incorporated by reference into the present application.

FIELD OF THE INVENTION

[0002] The present invention relates to compositions and methods related to controlling pests.

BACKGROUND

[0003] While the first recorded use of chemicals to control pests dates back to 2500 BC, only in the last 60 years has chemical control has been widely used. Early pesticides included hellebore to control body lice, nicotine to control aphids, and pyrithrin to control a wide variety of insects. Lead arsenate was first used in 1892 as an orchard spray, while at the same time it was discovered that a mixture of lime and copper sulphate (Bordeaux mixture) controlled downy mildew, a fungal disease of grapes. Many of the more recent pesticides have been developed to target specific biochemical reactions within the target organism, e.g. an enzyme necessary for photosynthesis within a plant or a hormone required for normal development in an insect.

[0004] Recently, there has been increased research into the deleterious effects of chemical pesticides, with concomitant efforts to develop safer alternatives to current commercial pesticides. Some of this research has focused on the use of natural products, such as combinations of chemicals obtained from plants, such as essential oils.

[0005] In general, synthetic chemical pesticides and natural pesticides are applied in particular formulations that facilitate their use against pests in the field. For example, hydrophobic pesticidal compounds, such as essential oils, have been used in formulations, such as emulsions, that permitted admixture with water to form a spray. However, in general, these formulations have simply been employed to facilitate application of the pesticide directly to the pests or to the surfaces or environments inhabited by the pests.

[0006] Microemulsions are clear uniform liquid mixtures of oil, water and surfactant. In part, because its surfactant component is a wetting agent that lowers the surface tension of liquid, microemulsions tend to consist of a mixture that can be spread easier than other mixtures and thus provide greater surface area. Perhaps for this reason, considerable attention has been directed toward microemulsion-based pesticidal formulations. Although the formulation of microemulsions is far from being an exact science, as many oil based pesticides are not able to microemulsify and the interactions between oil, emulsifiers and water molecules are still not completely understood, microemulsion formulations appear to be an emerging standard for the formulation of hydrophobic pesticides in water-based carriers.

[0007] Efforts to improve the activity of pesticides have been mainly directed toward discovering new compounds that may act as active ingredients of the pesticide. Heretofore, attention has not been focused on the optimization of formulations specifically as a route to improve the activity of the active pesticidal ingredients in the formulations.

BRIEF DESCRIPTION OF THE FIGURES

[0008] Exemplary embodiments are illustrated in referenced figures. It is intended that the embodiments and figures disclosed herein are to be considered illustrative rather than restrictive.

[0009] FIG. 1 depicts, in accordance with an embodiment described herein, a chart of percent of insects knocked down by of formulations of a blend containing the ingredients in the exemplified form of Ingredient Family 24 applied to the German cockroach.

[0010] FIG. 2 depicts, in accordance with an embodiment described herein, a chart of percent killed versus time by formulations of a blend containing the ingredients in the exemplified form of Ingredient Family 24 applied to the German cockroach.

DESCRIPTION OF THE INVENTION

[0011] The present disclosure relates to emulsion-based formulations of pesticides, specifically pesticidal blends of essential oils and other ingredients, that have been found to enhance the activity of the active pesticidal ingredients. Surprisingly, by preparing the pesticide as an emulsion formulation, the activity of an ingredient may be greatly enhanced and the efficacy of the pesticide may be vastly improved. In addition to increasing the overall potential potency of the pesticide, enhancing the activity of a key ingredient can also be helpful in reducing the amount of active ingredients that may be required for effective pest control. This, in turn, improves the overall safety of the pesticide and may increase the likelihood of a pesticide receiving EPA approval when it becomes developed for commercial application.

[0012] In addition, the present disclosure relates to a dust formulation that also improves the activity of pesticidal blends that are formulated in this manner. Such dust formulations are employed in hard-to-reach areas that are not amenable to the application of liquid sprays. Commercially available dust formulations include DeltaDust and Drione®. As with the emulsion-based formulations of pesticides, these formulations themselves have not been not known to specifically enhance the activity of the active ingredients in the dust formulations.

[0013] Embodiments of the invention are directed to compositions for controlling insects and methods for using these compositions. Embodiments of the invention include compositions for controlling pests, which can include one or more plant essential oils and methods for using these compositions. The plant essential oils, when combined, can have a synergistic effect. The compositions also can include a fixed oil, which is typically a non-volatile non-scented plant oil. Additionally, in some embodiments, these compositions can be made up of generally regarded as safe (GRAS) compounds.

[0014] For purposes of simplicity, the term "pest" shall be used in this application. However, it should be understood that the term "pest" that encompasses a variety of life forms such as various types of animals including worms and insects, fungi, plants, protists, and monerans. As used in this application the term "insect" refers, not only to insects, but also tomites, spiders, and other arachnids, larvae, and like invertebrates. Also for purposes of this application, the term "pest control" shall refer to having a repellant effect, a pesticidal effect, or both. "Repellant effect" is an effect

wherein more pests are repelled away from a host or area that has been treated with the composition than a control host or area that has not been treated with the composition. [0015] "Pesticidal effect" is an effect wherein treatment with a composition causes at least about 1% of the pests to die. In this regard, an LC1 to LC100 (lethal concentration) or an LD1 to LD100 (lethal dose) of a composition will cause a pesticidal effect. In some embodiments, the pesticidal effect is an effect wherein treatment with a composition causes at least about 5% of the exposed pests to die.

[0016] In some embodiments, the pesticidal effect is an effect wherein treatment with a composition causes at least about 10% of the exposed pests to die. In some embodiments, the pesticidal effect is an effect wherein treatment with a composition causes at least about 25% of the pests to die. In some embodiments the pesticidal effect is an effect wherein treatment with a composition causes at least about 50% of the exposed pests to die. In some embodiments the pesticidal effect is an effect wherein treatment with a composition causes at least about 75% of the exposed pests to die. In some embodiments the pesticidal effect is an effect wherein treatment with a composition causes at least about 90% of the exposed pests to die.

[0017] As used herein, the term "bioassay," refers to a quantitative procedure used to determine the relationship between amount (or dose or concentration) of pesticide administered and the magnitude of response in the living organism.

[0018] As used herein, the term "KD" refers to knockdown. "Knockdown" is an effect wherein treatment with a composition causes at least about 1% to display reduced mobility. In some embodiments, the knockdown is an effect wherein treatment with a composition causes at least about 50% of the exposed pests to die.

[0019] As used herein, the term " KT_{50} " means the knockdown time of 50% of a given population or strain. Similarly, the term " KT_{95} " means the knockdown time of 95% of a given population or strain.

 $\boldsymbol{[0020]}$. As used herein, the term "C.I." means confidence interval.

[0021] As used herein, the term "Percent Control" refers to a percentage out of 100%.

[0022] As used herein, the term "A.I." means active ingredient.

[0023] As used herein, the term "RTU" means Ready-To-Use sprayer.

[0024] As used herein and know to one of skill in the art, the spectrum of various types of emulsions in terms of both water out and oil out, as well as size distribution of the emulsion are incorporated in the term "emulsions," including microemulsions. Nevertheless, in particular embodiments of the present invention the formulation agents are not such as to form a microemulsion. Embodiments encompassing all or some formulations other than microemulsions are specifically contemplated.

[0025] As used herein, "repellant effect" is an effect wherein more pests are repelled away from a host or area that has been treated with the composition than a control host or area that has not been treated with the composition.

[0026] As used herein, "component of a composition" refers to a compound, or a subset of compounds included in a composition, e.g., the complete composition minus at least one compound.

[0027] As disclosed herein, molecular components required for pest behavior and survival were identified, offering molecular targets for the development of pesticides. Although many of the blends described herein were originally developed against insects, they have been found to have surprising antifungal, herbicidal and other properties against other genera of pests in addition to insects. These effects are enhanced by the formulations

[0028] Embodiments of the invention are directed to compositions for controlling pests and methods for preparing and using these compositions. Compositions of the present invention can include any of the following oils, formulations, chemicals, compounds, or mixtures thereof:

[0029] Isopropyl myristate. Isopropyl myristate, also known as methylethyl ester or myristic acid isopropyl ester, is an ester of isopropanol and myristate acid.

[0030] Wintergreen oil is oil from the shrub genus *Gaultheria*. Methyl salicylate, the main constituent of the oil, is not present in the plant until formed by enzymatic action from a glycoside within the leaves.

[0031] Thyme oil. Thyme oil is a natural product that can be extracted from certain plants, including species from the Labiatae family; for example, thyme oil can be obtained from *Thymus vulgaris* (also known as, *T. ilerdensis*, *T aestivus*, and *T. velantianus*).

[0032] Geraniol. Geraniol, also called rhodinol, is a monoterpenoid and an alcohol. It is the primary part of oil-of-rose and palmarosa oil. It is used in perfumes and as a flavoring. It is also produced by the scent glands of honey bees to help them mark nectar-bearing flowers and locate the entrances to their hives. In certain embodiments, where geraniol is employed, it may be mixed with 10%, 20%, 30%, or 40% or more nerol. Commercially obtained geraniol may be designated by the amount of geraniol it contains. For example, a 60/40 mixture of geraniol is termed "geraniol 60"

[0033] In one embodiment, the present invention provides a pest control composition comprising an active ingredient and an inert ingredient. In another embodiment, the active ingredient includes Blend 11, Blend 35 and/or Blend 38 (Table 1 herein). In another embodiment, the active ingredient includes isopropyl myristate, wintergreen oil, geraniol and/or thyme oil. In another embodiment, expressed as percentage by weight, the insect control composition is a compound that includes 30-40% isopropyl myristate, 40-50% wintergreen oil, and/or 15-25% thyme oil. In another embodiment, expressed as percentage by weight, the active ingredient is a compound that includes 30-55% isopropyl myristate, 10-40% geraniol, and/or 25-40% thyme oil. In another embodiment, the insect control composition includes 48.35% isopropyl myristate, 14.98% geraniol fine FCC, and/or 36.67% thyme oil. In another embodiment, the insect control composition includes 38.650% isopropyl myristate, 29.940% geraniol fine FCC, and/or 31.410% thyme oil.

[0034] In one embodiment, the inert ingredient may serve to enhance the effectiveness of the active ingredient as a pest control. In another embodiment, the inert ingredient enhances the effectiveness of the active ingredient as a pest control agent by increasing the surface area of the active ingredient. In another embodiment, the inert ingredient is an emulsion formulation. In another embodiment, the inert ingredient is a microemulsion. In another embodiment, the inert ingredient is an SLS/xanthan gum formulation, and/or

an EC formulation. In another embodiment, the EC formulation is a Castor Oil Ethoylate and Tween 80 formulation.

[0035] While embodiments of the invention can include active ingredients, carriers, inert ingredients, and other formulation components, preferred embodiments begin with a primary blend. A primary blend is preferably a synergistic combination containing two or more active ingredients and, optionally, additional ingredients. The primary blends can then be combined with other ingredients to produce a formulation. Accordingly, where concentrations, concentration ranges, or amounts, are given herein, such quantities typically are in reference to a primary blend or blends. Thus, when a primary blend is further modified by addition of other ingredients to produce a formulation, the concentrations of the active ingredients are reduced proportional to the presence of other ingredients in the formulation.

[0036] In another embodiment, the present invention provides a method of controlling pests by administering compounds of the present invention described herein. The compositions of the present invention can be used to control pests by either treating a host directly, or treating an area in which the host will be located. For example, the host can be treated directly by using a cream or spray formulation, which can be applied externally or topically, e.g., to the skin of a human. A composition can be applied to the host, for example, in the case of a human, using formulations of a variety of personal products or cosmetics for use on the skin or hair. For example, any of the following can be used: fragrances, colorants, pigments, dyes, colognes, skin creams, skin lotions, deodorants, tales, bath oils, soaps, shampoos, hair conditioners and styling agents.

[0037] In the case of an animal, human or non-human, the host can also be treated directly by using a formulation of a composition that is delivered orally. For example, a composition can be enclosed within a liquid capsule and ingested.

[0038] An area can be treated with a composition of the present invention, for example, by using a spray formulation, such as an aerosol or a pump spray, or a burning formulation, such as a candle or a piece of incense containing the composition. Of course, various treatment methods can be used without departing from the spirit and scope of the present invention. For example, compositions can be comprised in household products such as: air fresheners (including heated air fresheners in which insect repellent substances are released upon heating, e.g., electrically, or by burning); hard surface cleaners; or laundry products (e.g., laundry detergent-containing compositions, conditioners).

[0039] In some embodiments, repellant effect is an effect wherein at least about 75% of pests are repelled away from a host or area that has been treated with the composition. In some embodiments, repellant effect is an effect wherein at least about 90% of pests are repelled away from a host or area that has been treated with the composition.

[0040] In another embodiment, the present invention provides a method of preparing a pesticide by combining one or more of the compounds and/or formulations described herein. By blending certain compounds and/or formulations in certain relative amounts, the resulting composition demonstrates a repellant or pesticidal effect that exceeds the repellant or pesticidal effect of any component of the composition. In another embodiment, the formulation is an

emulsion. In another embodiment, the formulation is a microemulsion. In another embodiment, the formulation is a dust formulation.

[0041] In another embodiment, the present invention provides a method of preparing a formulated sprayable product by combining an active ingredient and an inert ingredient. For example, the active ingredient may be, as described herein, Blend 11, Blend 35 and/or Blend 38. Or, for example, the inert ingredient may be an emulsion formulation, microemulsion formulation, SLS/Xanthan Gum formulation, EC formulation, or dust formulation. In another embodiment, the EC formulation is a Castor Oil Ethoylate and Tween 80 formulation.

[0042] Further discussion of various approaches to screening, preparing, evaluating, and using insect control formulations are also disclosed in the following applications, each of which is incorporated by reference in its entirety: U.S. application Ser. No. 10/832,022, entitled COMPOSITIONS AND METHODS FOR CONTROLLING INSECTS; U.S. application Ser. No. 11/086,615, entitled COMPOSITIONS AND METHODS FOR CONTROLLING INSECTS RELATED TO THE OCTOPAMINE RECEPTOR; U.S. application Ser. No. 11/365,426, entitled COMPOSITIONS AND METHODS FOR CONTROLLING INSECTS INVOLVING THE TYRAMINE RECEPTOR; U.S. Provisional Application 60/807,600, entitled COMPOSITIONS AND METHODS FOR CONTROLLING INSECTS; U.S. Provisional Application 60/805,963, entitled COMPOS-MONS FOR TREATING PARASITIC INFECTIONS AND METHODS OF SCREENING FOR SAME; U.S. Provisional Application 60/718,570, entitled COMPOSITIONS HAVING INSECT CONTROL ACTIVITY AND METH-ODS FOR USE THEREOF; U.S. application Ser. No. 12/009,220, entitled PEST CONTROL COMPOSITIONS AND METHODS.

[0043] One skilled in the art will recognize many methods and materials similar or equivalent to those described herein, which could be used in the practice of the present invention. Indeed, the present invention is in no way limited to the methods and materials described.

EXAMPLE S

[0044] The following examples are provided to better illustrate the claimed invention and are not to be interpreted as limiting the scope of the invention. To the extent that specific materials are mentioned, it is merely for purposes of illustration and is not intended to limit the invention. One skilled in the art may develop equivalent means or reactants without the exercise of inventive capacity and without departing from the scope of the invention.

[0045] As readily understood by one of skill in the art, there are any number of additional blends, compounds and ingredients may also be used in conjunction with the various embodiments described herein. Thus, in addition to or in substitution of the specific ingredients and/or formulations described in the specification above and the following examples, there are additional combinations of blends and compounds that are within the scope of compounds claimed herein. For example, various compositions are provided, including a first agent comprising a blend selected from Table 1 (below) and a second agent comprising a formulation that enhances the activity of the first agent.

[0046] The foregoing Table 1 provides exemplary combinations of ingredients for useful blends in accordance with the invention. In many cases a particular ingredient is listed very specifically such as, for example, with reference to a CAS number and/or particular modifiers of the basic name of the ingredient. Such specific listings are non-limiting examples of types of ingredients, and similar ingredients (such as, for example, with different CAS numbers and/or variant forms of the type of ingredient) can be substituted within the scope of certain embodiments of the invention.

[0047] The foregoing Table 1 also provides an exemplary range of amounts of each ingredient expressed as a weight/ weight percentage of the listed blend. The exemplary range for each ingredient in each blend is provided as a number in the fourth column indicating a value at the low end of such exemplary range, and in the fifth column indicating a value at the high end of such exemplary range. The provided ranges are exemplary; other useful ranges exist and are expressly within the scope of certain embodiments on the invention. Namely, other high and low amounts defining

other useful ranges and/or amounts of the listed ingredients, can include 1%, 2%, 5%, 10%, 15%, 20%, 25%, 40%, 50%, 60%, 75%, 85%, 95%, 110%, 125%, 150%, 175%, 200%, 250%, 300%, 400%, 500%, 750%, 900%, or 1000% of the amount listed as the low amount and/or the high amount,

with the caveat that the relative percentage of any given ingredient cannot exceed 99.99% of the total blend of ingredients.

[0048] Furthermore, other blends useful in accordance with the present invention are shown in the following table.

[0049] Additionally, as readily apparent to one of skill in the art, various formulations of emulsions and methods of preparing emulsions are known to one of skill in the art and the invention is in no way limited to the specific formulations described herein. As used herein and apparent to one of skill in the art, microcmulsion formulations are encompassed by the term "emulsions." Although in no way so limited, ingredients described in Environmental Protection

Agency 40 C.F.R. § 180.950, as well as those described in Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) 's § 25(b) Food-Use listing and § 25(b) Non-Food listing for pesticide products (See Table 3 (a) and (b) below), are hereby submitted as possible examples of ingredients and formulating compounds that may also be used to formulate emulsions in conjunction with the various embodiments described herein.

Example 1

Ingredient Family 24 in SLS/XG and in the Castor Oil/Tween EC

[0050] Administering 15% of a blend containing the ingredients in the exemplified form of Ingredient Family 24 (See Table 2: specifically, 34.29% Isopropyl myristate, 45.11% Wintergreen oil, 20.59% of a mixture of 99% Thyme Oil White and 1% thyme oil red, with ingredient expressed as a weight/weight percentage) in an SLS/Xanthan gum formulation (0.15% SLS, 1% xanthan gum, 83.85% water, with ingredient expressed as a weight/weight percentage) at 60 seconds, 100 seconds, and 300 seconds, resulted in 1.33, 5.0, and 8.0, respectively, average knockdown of German Cockroach. (See FIG. 1 herein). This may be compared to results of administering ME-1, used as a reference microemulsion formulation (see FIG. 1 herein), which at 60 seconds, 100 seconds, and 300 seconds, resulted in 0, 0, and 0.67, respectively, average knockdown of German Cockroach. Similarly, administering 15% Blend 35 SLS/Xanthan gum formulation at 60 seconds, 100 seconds, and 300 seconds, resulted in 1.0, 4.33 and 8.0, respectively, average kills of German Cockroach. (See FIG. 2 herein). This may be compared to results of administering ME-1 which at 60 seconds, 100 seconds, and 300 seconds, resulted in 0, 0, 0.33, respectively, average kills of German Cockroach.

[0051] With reference to FIG. 1 herein, administering 15% Blend 35 Ethoxylated Castor oil/Tween 80 formulation (0.83% Ethoxylated Castor oil, 0.83% Tween 80, 83.3% water, with ingredient expressed as weight/weight percentage) at 60 seconds, 100 seconds, and 300 seconds, resulted in 2.33, 5.33, and 7.33, respectively, average knockdown of German Cockroach. This may be compared to results of administering ME-1, which at 60 seconds, 100 seconds, and 300 seconds, resulted in 0, 0, and 0.67, respectively, average knockdown of German Cockroach. Similarly, with reference to FIG. 2 herein, administering 15% Blend 35 Ethoxylated Castor oil/Tween 80 formulation at 60 seconds, 100 seconds, and 300 seconds, resulted in 1.67, 4.67 and 7.0, respectively, average kills of German Cockroach. This may be compared to results of administering ME-1, which at 60 seconds, 100 seconds, and 300 seconds, resulted in 0, 0, 0.33, respectively, average kills of German Cockroach.

[0052] The above referenced formulations were administered as part of a trigger spray assay with ten (10) roaches per replicate, with three (3) replicates.

Example 2

Microemulsion Formulations Improve Activity

[0053] With respect to FIG. 1, administering ME-2 resulted in 3, 8.33 and 10 average knockdown of German Cockroach, at 60 seconds, 100 seconds, and 300 seconds, respectively. Similarly, administration of ME-3 resulted in 6.33, 9 and 10 average knockdown of German Cockroach, at 60 seconds, 100 seconds, and 300 seconds, respectively, and ME-4 resulting in 8.33, 10 and 10 average knockdown of German Cockroach, at 60 seconds, 100 seconds, and 300 seconds, respectively.

[0054] With respect to FIG. 2, administering ME-2 resulted in 1.67, 7.33 and 10 average kills of German Cockroach, at 60 seconds, 100 seconds, and 300 seconds, respectively. Similarly, administration of ME-3 resulted in

4.67, 7.67 and 10 average kills of German Cockroach, at 60 seconds, 100 seconds, and 300 seconds, respectively, and ME-4 resulting in 6.67, 9.67 and 10 average kills of German Cockroach, at 60 seconds, 100 seconds, and 300 seconds, respectively.

[0055] The above referenced formulations were administered as part of a trigger spray assay with ten (10) roaches per replicate, with three (3) replicates.

Example 3

Ingredient Family 24 in SLS/XG

[0056] Blend 38 (Table 1 herein) can be combined with an SLS/Xanthan gum formulation (0.15% SLS, 1% xanthan gum, 83.85% water, with ingredient expressed as a weight/weight percentage). Administration of this combined formulation can result in an improved activity of pesticidal blends, such as an increase in average knockdown and kills of pests as compared to the efficacy of the blend or independent ingredients alone.

Example 4

Ingredient Family 25 in Castor Oil/Tween EC

[0057] A blend containing the ingredients in the exemplified form of Ingredient Family 25 (Table 2 herein) can be combined with an Ethoxylated Castor oil/Tween 80 formulation (0.83% Ethoxylated Castor oil, 0.83% Tween 80, 83.3% water, with ingredient expressed as weight/weight percentage). Administration of this combined formulation can result in an improved activity of pesticidal blends, such as an increase in average knockdown and kills of pests as compared to the efficacy of the blend or independent ingredients alone.

Example 5

Ingredient Family 24 in SLS/XG

[0058] A blend containing the ingredients in the exemplified form of Ingredient Family 24 (Table 2 herein) can be combined with an SLS/Xanthan gum formulation (0.15% SLS, 1% xanthan gum, 83.85% water, with ingredient expressed as a weight/weight percentage). Administration of this combined formulation can result in an improved activity of pesticidal blends, such as an increase in average knockdown and kills of pests as compared to the efficacy of the blend or independent ingredients alone.

Example 6

Ingredient Family 24 in Castor Oil/Tween EC

[0059] A blend containing the ingredients in the exemplified form of Ingredient Family 24 (Table 2 herein) can be combined with an Ethoxylated Castor oil/Tween 80 formulation (0.83% Ethoxylated Castor oil, 0.83% Tween 80, 83.3% water, with ingredient expressed as weight/weight percentage). Administration of this combined formulation can result in an improved activity of pesticidal blends, such as an increase in average knockdown and kills of pests as compared to the efficacy of the blend or independent ingredients alone.

Example 7

Ingredient Family 24 in Dust Formulation

[0060] A blend containing the ingredients in the exemplified form of Ingredient Family 24 (Table 2 herein) can be combined with a dust formulation (20% of the blend, 20% Microcel E, 20% calcium carbonate, and 40% sodium bicarbonate). Administration of this combined formulation can result in an improved activity of pesticidal blends, such as an increase in average knockdown and kills of pests as compared to the efficacy of the blend or independent ingredients alone.

Example 8

Ingredient Family 30 in Dust Formulation

[0061] A blend containing the ingredients in the exemplified form of Ingredient Family 30 (Table 2 herein) can be combined with a dust formulation (20% of the blend, 20% Microcel E, 20% calcium carbonate, and 40% sodium bicarbonate). Administration of this combined formulation can result in an improved activity of pesticidal blends, such as an increase in average knockdown and kills of pests as compared to the efficacy of the blend or independent ingredients alone.

Example 9

Ingredient Family 30 in Dust Formulation

[0062] A blend containing the ingredients in the exemplified form of Ingredient Family 30 (Table 2 herein) can be combined with a dust formulation (20% of the blend, 20% Microcel E, 20% calcium carbonate, and 40% sodium bicarbonate) combined with oil at specific ratio). Administration of this combined formulation can result in an improved activity of pesticidal blends, such as an increase in average knockdown and kills of pests as compared to the efficacy of the blend or independent ingredients alone.

Example 10

Ingredient Family 24, 25, or 30 in TGO/Lecithin

[0063] Blends containing any of containing the ingredients in the exemplified form of Ingredient Families 24, 15, or 30 (Table 2 herein) can be combined with an TGO/lecithin formulation (15% of the blend, with 0.15% polyglycerol oleate, 0.03% soy lecithin, 0.11% potassium sorbate, 0.225% xanthan gum, 2.5% isopropyl alcohol, and 82% water, with each ingredient expressed as a weight/weight percentage). Administration of this combined formulation can result in an improved activity of pesticidal blends, such as an increase in average knockdown and kills of pests as compared to the efficacy of the blend or independent ingredients alone.

Example 11

Generally

[0064] Formulated Sprayable Product: Active Ingredient ((a) Ingredient Family 24, (b) Ingredient Family 25, and/or (c) Ingredient Family 30))+Inert Ingredient ((a) SLS/Xanthan Gum, (b) dust formulation and/or (c) EC formulation)).

[0065] One of ordinary skill in the art will recognize that modifications and variations are possible without departing from the teachings of the invention. This description, and particularly the specific details of the exemplary embodiments disclosed, is provided primarily for clearness of understanding and no unnecessary limitations are to be understood therefrom, for modifications and other embodiments will become evident to those skilled in the art upon reading this disclosure and can be made without departing from the spirit or scope of the claimed invention.

1-36. (canceled)

- **37**. A composition for controlling pests comprising isopropyl myristate, geraniol, and a solid formulation agent.
- **38**. The composition for controlling pests of claim **37**, wherein the formulation agent comprises at least one of calcium carbonate, sodium bicarbonate, and calcium silicate
- **39**. The composition for controlling pests of claim **37**, wherein the composition is in a form of a dust.
- **40**. The composition for controlling pests of claim **37**, wherein the composition comprises:
 - 0.1% to 30% isopropyl myristate, by total weight of the composition;
 - 0.1% to 15% geraniol, by total weight of the composition; and
 - the formulation agent, wherein the formulation agent comprises at least one of calcium carbonate, sodium bicarbonate, and calcium silicate.
- **41**. The composition for controlling pests of claim **37**, wherein the composition comprises:
- 0.1% to 10% isopropyl myristate, by total weight of the composition;
- 0.1% to 8% geraniol, by total weight of the composition; and
- the formulation agent, wherein the formulation agent comprises at least one of calcium carbonate, sodium bicarbonate, and calcium silicate.
- **42**. The composition for controlling pests of claim **37**, further comprising thyme oil.
- **43**. The composition for controlling pests of claim **42**, wherein the composition comprises, by total weight of the composition, 3.00% to 31.4% thyme oil and 3.00% to 29.9% geraniol.
- **44**. The composition for controlling pests of claim **37**, wherein the composition comprises:
 - 0.1% to 30% thyme oil, by total weight of the composi-
 - 0.1% to 10% isopropyl myristate, by total weight of the composition;
 - 0.1% to 5% geraniol, by total weight of the composition; and
 - the formulation agent, wherein the formulation agent comprises at least one of calcium carbonate, sodium bicarbonate, and calcium silicate.
- **45**. The composition for controlling pests of claim **37**, wherein the composition comprises:
 - 0.1% to 30% thyme oil, by total weight of the composi-
 - 0.1% to 8% isopropyl myristate, by total weight of the composition;
 - 0.1% to 4% geraniol, by total weight of the composition;

- the formulation agent, wherein the formulation agent comprises at least one of calcium carbonate, sodium bicarbonate, and calcium silicate.
- **46**. The composition for controlling pests of claim **37**, wherein the composition comprises:
 - 0.1% to 25% thyme oil, by total weight of the composition:
 - 0.1% to 8% isopropyl myristate, by total weight of the composition;
 - 0.1% to 4% geraniol, by total weight of the composition; and
 - the formulation agent, wherein the formulation agent comprises at least one of calcium carbonate, sodium bicarbonate, and calcium silicate.
- **47**. The composition for controlling pests of claim **37**, wherein the composition comprises:
 - 0.1% to 20% thyme oil, by total weight of the composition;
 - 0.1% to 5% isopropyl myristate, by total weight of the composition:
 - 0.1% to 4% geraniol, by total weight of the composition; and
 - the formulation agent, wherein the formulation agent comprises at least one of calcium carbonate, sodium bicarbonate, and calcium silicate.
- **48**. The composition for controlling pests of claim **37**, wherein the pests comprise mites.
- **49**. The composition for controlling pests of claim **37**, wherein the pests are selected from the group consisting of insects, mites, spiders, arachnids, arachnoids, cockroaches, larvae, and invertebrates.
- **50**. The composition for controlling pests of claim **37**, wherein the pests are selected from the group consisting of worms, insects, fungi, plants, protists, and monerans.
- 51. The composition for controlling pests of claim 42, wherein the pests comprise mites.
- **52**. The composition for controlling pests of claim **42**, wherein the pests are selected from the group consisting of insects, mites, spiders, arachnids, arachnoids, cockroaches, larvae, and invertebrates.
- **53**. The composition for controlling pests of claim **42**, wherein the pests are selected from the group consisting of worms, insects, fungi, plants, protists, and monerans.

- **54**. The composition for controlling pests of claim **37**, wherein the composition comprises:
 - 0.1% to 10% isopropyl myristate, by total weight of the composition;
 - 0.1% to 8% geraniol, by total weight of the composition; and
 - the formulation agent, wherein the formulation agent comprises at least one of calcium carbonate, sodium bicarbonate, and calcium silicate;
 - wherein the pests are mites; and
 - wherein the composition is in a form of a dust.
- **55**. The composition of claim **54**, wherein the formulation agent comprises calcium carbonate, sodium bicarbonate, and calcium silicate.
- **56.** The composition for controlling pests of claim **37**, wherein the composition comprises:
 - 0.1% to 20% thyme oil, by total weight of the composition:
 - 0.1% to 5% isopropyl myristate, by total weight of the composition:
 - 0.1% to 4% geraniol, by total weight of the composition;
 - the formulation agent, wherein the formulation agent comprises at least one of calcium carbonate, sodium bicarbonate, and calcium silicate;

wherein the pests are mites; and

wherein the composition is in a form or a dust.

- **57**. The composition of claim **56**, wherein the formulation agent comprises calcium carbonate, sodium bicarbonate, and calcium silicate.
- **58**. A dust formulation for controlling pests comprising the composition of claim **37**.
- **59**. The dust formulation for controlling pests of claim **58**, wherein the pests comprise mites.
- **60**. The dust formulation for controlling pests of claim **58**, wherein the pests are selected from the group consisting of insects, mites, spiders, arachnids, arachnoids, cockroaches, larvae, and invertebrates.
- **61**. The dust formulation for controlling pests of claim **58**, wherein the pests are selected from the group consisting of worms, insects, fungi, plants, protists, and monerans.
